

Education

Rice University

B.S. Computer Science – GPA: 4.03 / 4.33

HOUSTON, TX

Aug '16 – Dec '19

Work Experience

Plaid

SAN FRANCISCO, CA

Senior Software Engineer, Developer Efficiency Team

Aug '23 – Aug '25

- **Cost Savings:** directly saved ~\$1M/year. Migrated Prometheus in k8s from Intel to Graviton architecture. Productionized hackathon project to auto-hibernate idle remote development instances.
- **Buildkite CI/CD Migration:** authored and executed multi-year strategy to replace several Jenkins clusters for CI/CD workloads. Designed a platform (with security team input) to easily and securely migrate workloads to Buildkite with RBAC integration to existing Okta/AWS permissioning systems.
- **CI Velocity:** Buildkite migration cut median CI runtime from 34 to 20 minutes. Rollout of Bazel stage and test selection improved runtime to sub-15 minutes. Developer satisfaction for Build and Test tooling increased 17%.
- **AI Tooling Pilots:** designed and ran evaluations of AI developer tools across Plaid engineering, integrating tools, surveying engineers, and instrumenting metrics to measure effectiveness.

Software Engineer, Infrastructure Team and Developer Efficiency Team

Feb '20 – Aug '23

- **Cloud Remote Development Migration:** helped migrate local development environment from MacBooks to per-user cloud instances. Automated provisioning, monitoring, and maintenance with Terraform, Go, Packer, and Ansible. Co-authored Plaid's [public engineering blog post](#) on the project.
- **Deployment Dashboard:** designed and built internal developer dashboard to manage and monitor deployments across hundreds of microservices and dozens of repositories. Added backend system between GitHub and Jenkins to manage state and triggering, enabling visibility, intelligent filtering for deployments from monorepo, and emergency deployment locks.
- **Migrations:** helped de-risk migration of 300+ Plaid engineer MacBooks from Intel to ARM, ensuring developer tooling support on new architecture. Migrated self-hosted Docker image repository to Artifactory.
- **CI Improvements:** took ownership of three Jenkins clusters from Infrastructure team, running maintenance and enabling experimentation to improve cost, speed, and reliability of Jenkins for CI/CD workloads. Rewrote pipelines from mix of bash/groovy/Jenkinsfiles to Go for observability and testability, driving 33-90% reductions in runtimes of specific automated tests, decreasing median CI runtime by 40%, cutting CI compute requirements by 25% across Go and Python monorepos.

Software Engineer Intern, Infrastructure Team

May '19 – Aug '19

Migrated Go microservices to mTLS gRPC; deployed AWS load-balancer metrics exporter to Prometheus.

Microsoft

REDMOND, WA

Software Engineer Intern

May '18 – Aug '18

Built a video editing feature (captions, transcripts, metadata) in React/TypeScript for an internal content management tool in the Universal Store division.

Quantlab

HOUSTON, TX

Technology Intern

Jun '17 – Aug '17

Optimized high-performance market data streaming in Lua (+15% throughput) and built a Python utility for querying a distributed database.

Additional

Rice University

HOUSTON, TX

Head Teaching Assistant, Teaching Assistant

Aug '17 – Dec '19

Head TA over 30 TAs for advanced algorithms class. Head TA for team of 3 students responsible for autograder development for intro algorithms class. TA for other classes (artificial intelligence, object-oriented programming).

Lead Student Computing Consultant, Student Computing Consultant

Sep '16 – May '19

Oversaw hiring and training of 20 Student Computing Consultants working at the IT Help Desk.

Boy Scouts of America – Troop 364

RALEIGH, NC

Eagle Scout, Senior Patrol Leader

Jul '08 – Apr '15

Planned, organized, and executed construction of a computer lab for the Eagle Scout Project.

Skills

Languages: Go, Python, Bash **Infra:** AWS, Kubernetes, Docker, Terraform, Prometheus **CI/CD:** Buildkite, Jenkins, Bazel
